

BRIAN TEETERS

Software Engineer, Frontend Focus

Carmel, IN | brianteeters.dev@gmail.com | bateeters.github.io/portfolio | github.com/bateeters

SUMMARY

Frontend-focused software engineer with a design background that shows up in the code. Two years shipping production features across a .NET, C#, Razor, and JavaScript CMS platform powering 780+ live client sites, including a 300+ site migration off legacy infrastructure, a search component built for integration with competitor CMS platforms, and 10+ page templates and 4 themes built from scratch. Combines a visual-design eye with hands-on engineering execution in React, Node.js, and modern JavaScript.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C#

Frontend: React, Redux Toolkit, React Hooks, Context API, HTML5, CSS3, Bootstrap 5, Responsive Design, Axios, Vite, Webpack

Backend: Node.js, Express, MongoDB, Mongoose, REST APIs, JWT Authentication

Enterprise / CMS: Razor, .NET, MySQL, Salesforce, Adobe XD

Tools & Practices: Git, Docker, CI/CD, npm, Jira, Agile / Scrum, WCAG Accessibility Standards

EXPERIENCE

Software Developer

July 2024 – Present

VacationPort

Remote

- Led migration of 300+ CMS client sites from legacy to current infrastructure, reducing the internally maintained codebase by an estimated 25–30% and consolidating all 780+ active sites onto a single supported platform.
- Built and shipped a configurable search component now live on the platform, plus a standalone version bringing the proprietary search API to competitor CMS platforms.
- Designed and built 10+ CMS page templates and 4 themes from scratch, adopted across an estimated 50%+ of client sites and cutting new-site setup time by an estimated 35–45%.
- Identified a mobile-usability gap in the legacy CMS and built a timeline component prototype with a scroll-snap mobile card experience, which became the baseline for the platform's production reusable component.
- Contributed daily across C#, Razor, JavaScript, HTML, and CSS as part of a 6–8 person Agile team, through full sprint cycles, QA sign-off, and production releases.

Senior Graphic Designer

December 2017 – March 2023

EZAdsPro

Carmel, IN

- Designed and paginated 15–20 print marketing books featuring 100+ individual real estate agent advertisers, as a third-party design partner, from initial brief through final delivery.
- Translated marketing goals and brand guidelines into structured, user-focused layouts. That same thinking now shows up in frontend architecture and UI decisions.
- Drove internal production toward digital-first workflows, removing repetitive manual steps and improving consistency across deliverables.

PROJECTS

Food Chain Rumble (Full-Stack MERN, AI-Assisted Learning Project)

Live

foodchainrumble.onrender.com

- Built a full-stack MERN learning project by pairing with an AI coding assistant, setting feature scope and architecture direction while learning backend development hands-on.
- Delivered a character roster, global leaderboards, a community forum with voting, and a protected player dashboard on a React/Redux Toolkit frontend and an Express/MongoDB API.
- Deployed on Render via CI/CD; Docker Compose supports local development across a client/server monorepo. 170+ commits to date.

EDUCATION

AAS, Software Development

2023

Ivy Tech Community College, Indianapolis, IN

BFA, Visual Communication, Minor in Marketing

2017

Ball State University, Muncie, IN
