

BRIAN TEETERS

Software Developer | AI-Augmented Development

Carmel, IN | brianteeters.dev@gmail.com | bateeters.github.io/portfolio | github.com/bateeters

SUMMARY

Software developer who uses AI tools daily across the full development cycle to move faster and ship higher-quality work, backed by a design background that shows up directly in UI and UX decisions. Two years of production ownership on a .NET and JavaScript CMS platform powering 780+ live client sites, including a 300+ site migration, a platform-wide search component, and 10+ page templates adopted across an estimated 50%+ of sites. Currently building full-stack skills hands-on through Proof, an active portfolio project in React, TypeScript, C#/ASP.NET Core, and PostgreSQL.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript (active learning), C#

AI Development Tools: Claude / Claude Code, GitHub Copilot, ChatGPT

Frontend: React, Redux Toolkit, React Hooks, Context API, HTML5, CSS3, Bootstrap 5, Responsive Design, Axios, Vite, Webpack

Backend: Node.js, Express, ASP.NET Core, MongoDB, Mongoose, REST APIs, JWT Authentication, EF Core, PostgreSQL

Enterprise / CMS: Razor, .NET, MySQL, Salesforce, Adobe XD

Tools & Practices: Git, Docker, CI/CD, npm, Jira, Agile / Scrum, WCAG Accessibility Standards

EXPERIENCE

Software Developer

July 2024 – Present

VacationPort

Remote

- Led migration of 300+ CMS client sites from legacy to current infrastructure, reducing the internally maintained codebase by an estimated 25–30% and consolidating all 780+ active sites onto a single supported platform.
- Built and shipped a configurable search component now live on the platform, plus a standalone version bringing the proprietary search API to competitor CMS platforms.
- Designed and built 10+ CMS page templates and 4 themes from scratch, adopted across an estimated 50%+ of client sites and cutting new-site setup time by an estimated 35–45%.
- Identified a mobile-usability gap in the legacy CMS and built a timeline component prototype with a scroll-snap mobile card experience, which became the baseline for the platform's production reusable component.
- Works daily across C#, Razor, JavaScript, HTML, and CSS in a 6–8 person Agile team, using GitHub Copilot and ChatGPT across code drafting, debugging, code review, and documentation to increase throughput and output quality through each sprint cycle.

Senior Graphic Designer

December 2017 – March 2023

EZAdsPro

Carmel, IN

- Designed and paginated 15–20 print marketing books featuring 100+ individual real estate agent advertisers, as a third-party design partner, from initial brief through final delivery.
- Translated marketing goals and brand guidelines into structured, user-focused layouts. That same thinking now shows up in frontend architecture and UI decisions.

PROJECTS

Proof (React, TypeScript, C#/ASP.NET Core, Claude Code, Active Development)

In Progress

github.com/Bateeters/proof

- Building a full-stack cocktail recommendation web app in React, TypeScript, and C#/ASP.NET Core — writing React components, TypeScript types, C# entities, join tables, DTOs, and API controllers hands-on through each phase, with Claude Code handling framework setup and infrastructure.
- Completed phases include JWT auth, multi-profile CRUD with claims-based authorization, external API integration caching 426 cocktails to PostgreSQL, dynamic multi-filter discovery endpoints, a keyword-based season heuristic algorithm, and taste preference CRUD; full architecture and API design documented in the repo. 61+ commits and growing.

Food Chain Rumble (Full-Stack MERN)

Live

foodchainrumble.onrender.com

- Built a full-stack web app with a character roster, global leaderboards, a community forum with voting, and a protected player dashboard, using React/Redux Toolkit on the frontend and an Express/MongoDB API on the backend.
- Used Claude and ChatGPT as paired development tools throughout the build, setting feature scope, architecture direction, and UX decisions while critically reviewing generated code rather than accepting it blindly. Deployed on Render via CI/CD with Docker Compose for local dev. 170+ commits to date.

EDUCATION

AAS, Software Development

2023

Ivy Tech Community College, Indianapolis, IN

BFA, Visual Communication, Minor in Marketing

2017

Ball State University, Muncie, IN
